

Functional Requirements

- 1. Customers must be able to open a landing page with recommendations of content to watch
- 2. Customers must be able to search for content by title, genre etc.,
- 3. Customers should be able to play, pause, and resume watching content from multiple devices
- 4. Customers should be able to start/cancel subscription

Below the line

- 1. Customers should be able to download content to their devices

Non-Functional Requirements

- 1. Consistency > Availability - when a customer starts/cancels subscription so that they are not charged or refunded twice.
- 2. Availability > Consistency - all the other portions of the design
- 3. Scalability - 300M users -> 12 * 300 RPS -> 3600 Requests/sec
- 4. Latency
 - > Should be able to start watching content without noticeable delay i.e < 100ms should be good
 - > Opening the landing page, searching etc., should be quick < 100 ms
 - > Payments can take < 1 second as it has to go through external payment processors.
